Abstract—To provide scientific data of the internal transcribed spacer (ITS) and trnL-F sequences for the authentication of *Pulsatilla chinesis* (Bge.) Regel., we extracted the genome DNA from the leaves of *Pulsatilla.dahurica* (Fisch.) Spr., collected in Jilin Province, amplified the ITS and trnL-F region using ITS universal and trnL-F primers of angiosperm, and sequenced the purified PCR products directly. The obtained sequences were edited by Genetyx and reported here.

Keywords—*Pulsatilla.dahurica* (Fisch.) Spr.; ITS; trnL-F; Sequencing; Authentication.

I. INTRODUCTION

Chinese Anemone, the dried herb of *Pulsatilla chinesis* (Bge.) Regel. (Ranunculaceae), has the functions of detoxicating, removing heat from the blood and relieving diarrhea. It has been prescribed in every edition of «Chinese Pharmacopoeia» [1]. Although only *Pulsatilla chinesis* (Bge.) Regel is prescribed in «Chinese Pharmacopoeia», due to the historical reasons, there are still many areas in China use different species of *Pulsatilla* such as *Pulsatilla koreana* Nakai., *Pulsatilla.dahurica* (Fisch.) Spr., (distributed in northeast of China); *Pulsatilla turczaninowii* Krylov et Serg., *Pulsatilla ambigua* Turcz. ex Pritz (distributed in Inner Mongolia, Xinjiang of China) as Chinese Anemone [2]. These lead to mistakes in collecting and application, and affect the therapeutic effect of Chinese Anemone. So authentication of *Pulsatilla chinesis* (Bge.) Regel from the others is necessary for correct use of this drug. Although methods based on traditional appearance, microscopy and thin-layer chromatography have been established and even improved, but due to the similar morphology and the same chemical composition, it is very hard to authenticate Chinese Anemone from the others used as it by them. Recently, as a result of progresses in molecular biology, molecular authentication has become a new and very reliable method. An accurate method of molecular

authentication is generally established based on the data of DNA sequences, such as ITS and chloroplast genes like trnL-F, so sequencing of these regions of *Pulsatilla chinesis* (Bge.) Regel and the other plants that are used as Chinese Anemone becomes the most fundamental step. In this study, we sequenced the ITS and trnL-F region of *Pulsatilla.dahurica* (Fisch.) Spr. The obtained sequences were edited and reported here.

II. MATERIALS AND METHODS

A. Materials

Pulsatilla.dahurica (Fisch.) Spr. was collected in Jilin Province, China. The sample was authenticated by Professor Wenchang Guo of Jilin University (Table I). The leaves dried by silica gel were used for DNA extraction.

B. DNA Extraction

0.3 g leaf was taken from every sample, and put into a culture dish. The leaves were cleaned with cotton swabs to wipe out the impurities with 70% of alcohol. The dried leaves were then grinded to powders in liquid nitrogen and used to extract genome DNA using Plant DNA Isolation Reagent (Takara Biotechnology (Dalian) Co., Ltd., Dalian, China) following the manufacturer's manual. The extracted genome DNA was dissolved in adequate volume of ultrapure water. The quality of the DNA was checked by 1% agarose gel electrophoresis with 5 µL of each solution.

C. Primer Design

The universal primers of ITS [3] and trnL-F [4] were selected and synthesized by Takara Biotechnology (Dalian) Co., Ltd., (Dalian China). The sequences are as follows:

PCR primers:

For ITS:

ITS-F: 5'-TCC ACT GAA CCT TAT CAT TTA G-3'

ITS-R: 5'-CCA TGC TTA AAC TCA GCG GGT-3'

For trnL-F:

trnLF-cF: 5'-CGAAATCGGTAGACGCTACG-3'

trnLK-fR: 5'-ATITGAACTGGTGACACGAG-3'

Sequencing primers:

For ITS:

ITS-F: 5'-TCC ACT GAA CCT TAT CAT TTA G-3'

In-ITS-3'R:5'-GAC TCG ATG GTT CAC GGG ATT CT-3'

In-ITS-5'F: 5'-TCT CGC ATC GAT GAA GAA CG-3'

ITS-R: 5'-CCA TGC TTA AAC TCA GCG GGT-3'

For trnL-F:

trnLF-cF: 5'-CGAAATCGGTAGACGCTACG-3'

trnLF-dR: 5'-GGGGATAGAGGGACTTGAAC-3'

trnLK-eF: 5'-GGTTCAAGTCCCTCTATCCC-3'

trnLK-fR: 5'-ATITGAACTGGTGACACGAG-3'

D. PCR Amplification

PCR was performed in a 50µL reaction mixture containing 1µL of each C's PCR primer, 5µL of template DNA, 5µL of 10×Buffer, 5µL of dNTPs, 1µL of Taq DNA polymerase (Takara Biotechnology (Dalian) Co., Ltd., Dalian China). PCR was performed in the following conditions: 1 cycle of 94°C for 5 min, 35 cycles of denature at 94°C for 1 min, annealing at 55°C for 2 min, extension at 72°C for 2 min, 1 cycle of 72°C for 10 min. All the reactions were performed using MiniCycler PTC-150(MJ Research Inc, St. Bruno, Canada). All the PCR products were checked using a 1% agarose gel.

E. Sequencing

D's PCR products were purified using Montage PCR Filter Units (Millipore Corporation, USA.) and then sequenced. Sequencing reaction was performed in a 10µL reaction mixture by using ABI BigDye Terminator v3.1 Cycle Sequencing Kit (Applied Biosystems, USA.) with each of the sequencing primers. Sequencing reaction was performed in the following conditions: 1 cycle of 96°C for 1 min, 25 cycles of denature at 96°C for 30 sec, extension 50°C for 5 sec. 1 cycle of 60°C for 4 min. After purification, sequences were analyzed by using 3130 sequencer (Applied Biosystems, USA.).

F. Sequence Analysis

Genetyx-SV/RC version 11.0 (Software Development Co., Ltd., Tokyo, Japan) were used for editing of the sequences.

III. RESULTS

A. The Information of The Purchased Plants Is Shown in Table I. Three Individuals of Each Sample Were Used for Sequence Analysis.

TABLE I. THE LOCATION AND DATE OF SAMPLE COLLECTION

Species	Location	Date of collection
<i>Pulsatilla dahurica</i> (Fisch.) <i>Spr.</i>	Changqing Road 8 KM from, Changchun	2013-5-25

B. The ITS Sequences of *Pulsatilla Dahurica* (Fisch.)

Spr. Are as Follows:

IV. CONCLUSION

1. The ITS and trnL-F sequences of *Pulsatilla.dahurica* (Fisch.) Spr.collected in China is for the first time reported.
2. This study provided scientific data for molecular authentication of *Pulsatilla chinesis*(Bge.) Regel.
3. *Pulsatilla chinesis*(Bge.) Regel. distributed in wide area of China, there should be differences among the samples collected in different area, so this study is just a beginning. For authenticating *Pulsatilla chinesis*(Bge.) Regel. more precisely, enlargement of sample from various area and accumulation of these data should be necessary in the future.
