Abstract—Street racing became a teenager trend in Pasuruan East Java Indonesia, although accidents often come to pass but do not dampen the spirit of teenagers in street racing competition. The focus in this articles analyze significance of winning and how to get it in the street racing arena. The research design used by phenomenology which refers to the perspective from Edmund Huserl. The Data obtained from interviews and observations then analyzed using the phenomenology paradigm. The study found that the significance of winning for the racing team was money, pride and popularity. Some of the strategies to get a win are: a) motorcycle modification, b) choosing the right jockey, and c) asking for help from a shaman. This research is important to know especially for the drivers who will take part in this competition to prepare as much as possible so they can get winning and reduce the risk of accidents on the street.

Keywords—street racing, winning strategies, Pasuruan

I. INTRODUCTION

Adolescence is a tumultuous period [1], because of the high risk of being involved in various acts of delinquency. Street racing is one of the form of teenagers delinquency because high risk and illegal [2][3]. This action generally come from families with low economic backgrounds and dare to take risks because they are related to rewards [4].

Street racing does not only happen in Indonesia, such as in Ontario Canada, a survey of school students found that 33.7% of 11th and 12th grade students and 1% of 18 year olds were known to be involved in street racing [5], in San Diego United States the highway has been canged into an arena for illegal street racing that disturb safety of society, disturb pedestrian, vehicle traffic, creates public disturbances, and disturb the rights of private business owners because they enjoy the use they property [6]. In Aberdeen City of Scotland, young men who took part in street racing were called Bouley Bashers, which had been known since 1960 when they tested vehicle speed limits on Boulevard Beach (a quarter mile stretch of the main road from the seashore to newly built Aberdeen center in the city) [7]. In northwestern Italy teenagers between the ages of 14 and 17 are involved in street racing at least once in two months [8]. In Malaysia, the motorcycle racing culture among some teenagers known as "Mat Rempit" who modified most of the motorcycles to get a higher speed and the muffler was made not in accordance with the standards to get noise and they did this action to get respect from colleagues and other street racing communities because of courage and toughness [9].

Many factor causes teenagers to be involved in street racing, such as, environmental influences, speeding up, alcohol influence [10], lifestyle behaviors among teenagers, look for experience, satisfaction, as a form of recreation to resolve the boredom, release stress, spend free time, parental permissive parenting patterns and colleagues influence. That teenagers who are influenced by friends of the same age groups consider the law not important and they will make their own rules, every member of group must obey the rules and from this trigger aggressive behavior such as extortion and so on [11], Teenagers who are involved in street racing actions generally come from families with low economic backgrounds and dare to take risks because they are related to rewards [12].

Street racing action among teenagers has worries increase [13], is a social problem that has global status because it is often associated with accidents in speeding up [14], the behavior of increasing vehicle collisions, injuries, deaths and harm to participants and citizens who do not guilty so that it is a serious road safety problem [15]. Even predicted in 2030, road traffic accidents will be the fifth leading cause of death in the world [16].

Identifying research that male teenagers are the main group that contributes to collisions [17]. Male drivers have a negative attitude and are less obedient to traffic rules compared to other drivers [18]. In other to, young drivers are more confident at the age of 18-24 compared to 16-17
and therefore, they tend to overestimate their driving skills [19].

The impact of street racing such as what happened in Australia in 2011 that the population aged 17-25 years consists of 12.9%, but contributes 21.9% of road accidents. Young drivers are considered responsible in 78.9% of accidents mainly as a result at risk driving behaviors such as speeding [20], their wish to achieve goals faster [21] and high risk driving attitudes may also be related to daily driving delinquency, such as speed up and maneuver driving [22].

In Canada a population-based telephone survey conducted by the Traffic Injury Research Foundation reported that 68.7% of Canadians identified street racing as very concerning, ranked third highest in all road safety problems after drunk driving and breaking through red lights [23]. Based on the AAA Foundation for Traffic Safety in 2015 it was found that speeding on the highway is normal. Almost half of the drivers (48.4%) said they had driven 15 mph over the speed limit in freeway in the past month. Similarly, almost half of the drivers (45.0%) said they had driven 10 mph over the speed limit on residential roads in the past month. Also found that fatal collisions involving street racing tend to happen in urban highway and are almost six times more likely to happen at speeds exceeding 65 mph [24].

Some prevention strategies have been taken by the Government to minimize street racing such as in the United States, with education campaigns, disguising law enforcement operations, sanctioning race in a safe environment and being monitored from the race track. The law was made to reduce street racing, including riskdrivers in general [25]. Most of United States have laws against street racing, regulating licenses, regulating prison time and confiscating vehicles involved in street racing [26]. In Malaysia with education services and prevention programs for teenagers at risk, as well as counseling guidance at the school level. In Malaysia, the minimum age for someone to get B2 (250 cc and below motorcycle license) is 16 years old, but the most terrible finding is that 2.6% of participants in the study were under 16 years of age and they were riding without a motorcycle license motorcycle. [27].

Some studies have identifying street racing in some countries [5], [6], [7], [8], factors the affect teenagers doing street racing action [10], [11], [12], the resulting impact [20], [23], [24], the role of the government in overcoming street racing [25], [26], [27]. However, this research raises a study that has not been discussed in previous research is the significance of winning and the strategy to get winning at the street racing arena. This research is a phenomenological research that effort to explore what is the art of winning for teenagers racing and how to win strategies in the area of street racing.

II. RESEARCH METHODS

This research uses phenemenology research design, according to Edmund Husserl Phenomenology studies describe the meaning of a life experience for some people about a concept or phenomena. the subject of this research was the street racing team in P Sandaun subdistrict of Pasuruan Regency. Data collection techniques used are participatory observation methods and in depth interviews. And then data analysis techniques are carried out from four stages, are data collection (data collection), data reduction (data reduction), data presentation (data display) and conclusion verification (conclusion verification).

III. RESULTS AND DISCUSSION

The sound of exhaust motorcycle on Saturday night was heard from a motorbike that was driven at high speed on Karangjati public streets of Pandaan sub-district Pasuruan Regency. At that time the roads that usually crowded with traffic flow was transformed into a street racing arena with straight track 201 meter.

This action is very dangerous, both for those who do the race and for the people who are passing by. Besides that, the roar of the audience echoed on the road racing arena, and some were preparing for the bet. Race action usually starts after an agreement is reached between the two parties who will bet.

In the arena of street racing, victory can mean bringing the rupiah and catapulting the name of the driver (jockey), mechanic, owner of a racing bike and modification workshop. Money can be obtained, because the street racing event is identical to betting. Bets apply to anyone from motorbike owners or race / community viewers. Because be the winner this competition is everything so there must be the strategy.

A. Street racing strategy

Is a plan or action designed in such a way as to achieve victory in the street racing arena, was consist of: modify the shape of a motorcycle, choose a jockey and asking help of shaman.

1) Modification of Motorcycle Determine the winning

Motorcycle modification is changing the shape of a motorcycle from standard form to not standard without eliminating its original function to get optimal speed in the street arena because the engine capacity can be maximized, or handling capability is more optimized. As AT said: "... to achieve top speed, it is necessary to change the size of the motorcycle, change the gear ratio, nokes as, saher, pen receipt, exhaust ignition system and raise the CC engine. Same as with AF statement: The motorcycle used is no longer standard, the meaning that the motorcycle is modified to make the motor body lighter. The motor used is often only in the form of frames and engines ... "

The word of change delivered by AT shows the assumption that the motorcycle modification is the main determinant of winning. According to Law No. 22 of 2009 about Road Traffic and Transportation, set limitation that are permitted to make modifications. These limitations are:

a. Modification of motorcycle can be in the form of modification of dimensions, engine and carrying capacity.

b. Modification of motorcycle must not endanger the safety of traffic, disturb traffic flow, and damage the pavement layer / carrying capacity of the road. For example: change the flame of the brake light with white so that it has
the potential to dazzle and wrongly anticipate the danger to
the driver behind it.

c. Every modified motorcycle that changes
construction and material requirements must be subjected to
a repeat type test. This type of test will consist of physical
testing, for technical and road worthy requirements, and
design and engineering research. This type of test will be
carried out by the Government type testing unit.

d. And for motorcycle that have been re-tested,
registration and re-identification must be done.

Based on the laws and regulations that have been made
by the Government, motorbikes that are used as street racing
have violated the law because they have been modified to
nonstandard, both dimensions, engines and carrying
capacity so that they are not in accordance with the original
form of a standard motorcycle.

2) Reliable Jockey

Jockey is the designation for motorcycle riders in the
street racing arena, usually dominated by adolescence aged
12 to 22 who have the courage, guts and balanced body
to get money or just get popularity among wild racing or an
appreciation from a girl.

Not everyone can be a jockey who only fulfills
requirements such as: brave, big dare, sharp, balanced body
(RG). AF added: On average, wild racing jockeys don't
think about the risks that will be accepted, for those who are
important popular and get a girl friend.

Jockeys think their profession is very financially
rewarding, in every street racing arena they get a
commission from betting money, not only money and even
motorcycle to be bets. The money obtained can be used to
meet the living needs that are not obtained from parents,
because the average middle-to-low wild race racing jockey.
In other to, being number one jockey will gain popularity
among women, they assumption that girls will proud being
relationship with him.

Jockey is the dominated by adolescence, at this stage they
tend to be swayed by peer relationships, are still looking for
identity, they want to be recognized by the group, so it is not
surprising that many adolescence stuck in the struggle of
street racing with high risk only to be recognized by his
group and get popularity.

The search for self-identity in adolescence has a major
impact on the behavior of wild racing actions, especially
regarding the desire to continue to carry out wild racing
activities. At first time the jockey just wanted to try, but
because of curiosity and belief that winning could happen to
anyone, including himself and believed that he would win or
succeed someday, so that way making him to run wild races
repeatedly. Therefore, it is very vulnerable in adolescence
with a variety of delinquency activities, so the role of
parents is very large in educating their children so that they
do not get caught up in activities that damage the future of
adolescents, parents must be careful in applying parenting to
teenagers, hanging out and of course the provision of
religion must also be taught from an early age to
adolescents.

3) Occult elements of coloring the street racing event

The Pasuruan city was once the territory of Airlangga,
thick with Java nuances which was a requirement for
occultation in reaching something. This occult element
remains sustainable and is used in the street racing arena,
amulets and various shamanic properties color the arena for
winning purposes such as hair, bracelets, flowers of seven
shapes or holy water.

In the arena of street racing, not only relying on
modification of motorcycle and reliable jockeys, the most
important winning was the incantations from the shaman in
the form of a safety bracelet and seven-colored flowers
doused into the engine monitor (DU). A similar statement
was according by AF: When entering the corner suddenly
the engine died, apparently there was a lump of hair on the
jet in a motorcycle carburetor.

Safety bracelets, flowers of seven shapes and holy water
and hair are occult elements used in shamanic practice. The
item is believed to have the power to refuse custody or give
safety to its users or otherwise give bad luck to the enemy.
The item has strength because it has got the "suwuk" from the
Javanese term from the shaman. Jocky and team feel
calm when they get it all from the shaman, the advice from
the shaman is also always obeyed to just get a winning such
as not being able to drink alcohol and have free sex.

Modern teenagers usually no longer believe in mystical
things, but this is different in the world of wild road racing,
teenagers also still believe in mystical things such as asking
for help from a shaman. This explains that it turns out that
the local culture that is a parent's inheritance is still
embedded in their children, and that teenagers do not have
believed in their confidence. Based on the values in the
community asking for psychic help is considered taboo, but
still carried out by racers, drivers should not need
paranormal help because the driver's confidence is the
biggest suggestion that will give confidence that he will win.

IV. CONCLUSION

Street racing is always interesting to discuss, there are at
least three things that need to be done to get a winning, the
first is the modification of the motorcycle to optimize speed,
the second chooses a reliable jockey, the third uses the
services of a shaman. The winning in street racing arena is
the main goal to get money commissions from betting and
get popularity. It is suggested to street racing actors to
remain be cerefull in the arena, because street racing is
considered an activity that violates the norms of society,
causing lives to disappear in vain, causing anxiety so that it
is legally prohibited.
ACKNOWLEDGEMENT

Thank you to Prof. Dr. Sarmini, M.Hum, who has guided the writing of this article, so that this article can be completed. As well as speakers who have been willing to take the time to provide information to researchers, friends from the Master of Social Sciences Education, my family and everyone who has supported but cannot be mentioned individually.
