The purpose of this study is to describe the results of the social studies learning device based on didactic moral values and patriotism of the saga hang tuah to build the nationalism of junior high school students in Surabaya. This research uses descriptive qualitative method. The population comes from teachers who teach social studies at Junior High School 62 in Surabaya. This research recommendation is aimed for the teacher to build a soul nationalism of junior high school students in Surabaya memilih sampel based sampling area. Data analysis techniques used descriptive statistics with percentage techniques. The results show that the learning tools consisting of syllabus, learning implementation plans (RPP), instructional materials, student worksheets (LKS), learning outcomes tests, and didactic moral learning media and patriotism of saga hang tuah can be used as a guide for the teacher to build a soul nationalism of junior high school students in Surabaya. This research recommendation is aimed at schools or teachers so that they are able to develop the nationalism of students through the learning tools that have been developed.

Keywords—Hikayat Hang Tuah, IPS, Patriotism, Nationalism

I. INTRODUCTION

Globalization as a process of international integration brings several impacts caused by changes in world views, products, thoughts and other cultural aspects and can reduce national identity values [1]. Furthermore, globalization is a long historical process of life that threatens the foundation of national identity and must continue to be passed by each country [2]. At present, globalization has an influence on every sector and cannot be separated from the aspects of world life, such as the shifting values of nationalism [3]. One of the challenges of the people who live in the post-colonial era at this time is to build and instill a spirit of patriotism early on to citizens so that the spirit of nationalism does not fade with the times [4].

The realization of the spirit of patriotism and nationalism is carried out in various ways, in China patriotism is manifested through feelings of pride and strong emotional attachment to the state. Pride for all things that come from the country, including pride in the production of goods from their own country and giving full support to government policies [5]. In Israel, the spirit of patriotism inherent in the lives of citizens is not only expressed as a nationalism in the form of pride in the nation and nation, but more deeply in the strong social and contextual ties between individuals and society [6]. In Indonesia, someone who has a spirit of patriotism implies his readiness to defend the nation and state based on the spirit of nationalism in the form of unity, independence, humanity, pride, future success, and so on, and education becomes one of the vehicles to instill these values [7].

In general, nationalism is considered as a traditional understanding of the strength of social relations between peoples of a country [8]. Nationalism is a person's belief in the superiority of their nation compared to other nations [9]. Nationalism is important and dominant and serves as a basis for strengthening citizens' claims to the state and other social aspects [10]. On the other hand, people can show their nationalism identity through consumption of national products [11].

In Kyrgyzstan, the notion of nationalism is the unification of community groups with similarities in citizenship identity, the basis of the state, a feeling of sovereignty that is threatened, and widespread for political power [12]. In Ireland, the spirit of nationalism is intellectual behavior which is demonstrated by full service to the state [13]. In western countries, nationalism is not a
national identity, but a political force with the aim of influencing national policy and decision making [14].

The spirit of patriotism and nationalism will become stronger if the teachings are contained in the educational curriculum [15]. as a country that is able to outperform other countries, and a feeling of love for fellow citizens and the state is a method of teaching propaganda which is the main weapon to instill a spirit of patriotism in children in school[16]. The education sector, which consists mainly of experts ranging from basic education to higher education, is considered as an expert in education who has a big responsibility to use education to echo patriotism and nationalism in schools.

At school, historical subjects are used as a prominent means of identity to instill patriotism identity in students [17]. In Argentina and the Falkland Islands, nationalism is built through teaching in school classrooms by teachers by maximizing the use of textbooks and other teaching aids to learn national values [18]. Social studies subjects encourage a thorough understanding of the perspectives of globalization, current issues, and so on, further social studies emphasize the focus on knowledge that is nationalism and patriotism on the nation and state [19].

Various ways to instill nationalism have been carried out in various countries. In Indonesia, the government has played a role to build the spirit of nationalism through the planting of the four pillars of nationality in education [20]. The planting of the spirit of nationalism has been successfully carried out by the Dutch government through socializing and promoting warnings and national holidays [21]. In Singapore, Social Studies teachers provide an important role in building the spirit of nationalism through teaching with the aim of students having social sensitivity to understand the world around them[22]. Previous research was carried out through the insertion of nationalism values in learning, not yet focused on the use of traditional values-based learning tools to build a spirit of nationalism. Therefore, this study focuses more on the integration of the didactic moral values and patriotism of the saga of hang tuah to build the spirit of nationalism in students.

II. RESEARCH METHODS

This research is descriptive qualitative research. Data collection techniques using questionnaires. The subjects responded to five term categories using a Likert Scale, with a score of answers namely: very less (0% - 19.9%), less (20% -39.9%), enough (40% - 59.9%), good (60% -79.9%), and very good (80% -100%). The value interval in the questionnaire was used to understand the suitability of learning devices in building a nationalism for junior high school students in Surabaya. The population in this study is a junior high school social studies teacher in Surabaya by selecting sample representative who teach in class VII, VIII, and IX.

III. RESULTS AND DISCUSSION

Development of didactic moral value learning tools and patriotism of saga hang tuah to build the nationalism spirit of students having several interdependent and continuous components, namely Syllabus, RPP, Teaching Materials, Student Worksheets, Learning Media and Learning Outcomes Tests. Before being widely used, learning tools that have been compiled are tested to determine their quality and feasibility. In detail the results of the Learning Tools trial based on the grade level are as follows;

A. Test Results of Class VII Social Learning Devices, to Build the Soul of Nationalism for Junior High School Students in Surabaya

The results of the VII grade Social Studies Learning Device trial to Build a Soul of Nationalism for Junior High School Students in Surabaya can be observed in detail in Table 1. below;
